INTRODUCTION TO THE LLAMA

BACKGROUND BASICS

Llamas are members of the camel (camelid) family. Originating on the Central Plains of North America about 40 million years ago, llama-like animals dispersed to South America about 2.5 million years ago. By the end of the last Ice Age (10,000–12,000 years ago), camels were extinct in North America. Llamas were domesticated from guanacos in the Andean highlands of Peru 5,000 to 6,000 years ago, and are among the oldest domestic animals in the world. Primarily a beast of burden for the native herdsmen, llamas also provided them with meat, wool for clothing, hides for shelter and dried manure pellets for fuel. They were sometimes used as offerings to the gods. Today there are an estimated seven million llamas and alpacas (in approximate equal numbers) in South America and 74,000–77,000 llamas and 5,300–5,700 alpacas in the United States and Canada.

PHYSICAL FACTS ABOUT LLAMAS

<table>
<thead>
<tr>
<th>Life span:</th>
<th>About 15–20 years</th>
</tr>
</thead>
<tbody>
<tr>
<td>Weight:</td>
<td>250–450 pounds</td>
</tr>
<tr>
<td>Height:</td>
<td>36–47 inches at the shoulders; 60–77 inches at the head</td>
</tr>
<tr>
<td>Average gestation:</td>
<td>350 days</td>
</tr>
<tr>
<td>Birth:</td>
<td>A single baby (“cria”) is normally delivered without assistance from a standing mother during daylight hours. Twinning very rarely occurs.</td>
</tr>
<tr>
<td>Babies:</td>
<td>Birth weight is 20–35 pounds. Babies are normally up and nursing within 90 minutes. They are weaned at about six months old.</td>
</tr>
<tr>
<td>Reproduction:</td>
<td>Females are first bred at 16–24 months of age. Llamas do not have a heat cycle, but are induced ovulators (ovulation occurs 24–36 hours after breeding). Thus, they can be bred at any time of year.</td>
</tr>
<tr>
<td>Color:</td>
<td>Wool ranges from white to black, with shades of gray, beige, brown, red and roan in between. It may be solid, spotted, or marked in a variety of patterns.</td>
</tr>
<tr>
<td>Health:</td>
<td>Because llamas and their ancestors are specially suited to the harsh environment of their Andean homeland, North American owners will find them remarkably hardy, healthy, easy to care for, and remarkably disease free.</td>
</tr>

</table>
LLAMA FACTS

Llamas are adaptable to any climate or altitude. In extreme weather, a three-sided shelter is recommended for protection from wind, snow, or heat.

Llamas communicate in several ways. Sometimes, they communicate with a series of ear, body and tail postures. At other times, they make a shrill alarm call or clucking sound. They also make a humming sound.

Llamas have a useful coat of wool. It takes 24 months to grow the longest fibers, but a complete coat will come back in 12 months. They could be sheared yearly. A llama will produce from 3–8 pounds of wool per year. If shorn, one should not clip closer than one inch from the skin with sheep shears so the llama has ample protection from the sun. It is acceptable to brush and comb the llama’s wool. Wool fibers are from 2–8 inches in length.

Spitting is the llama’s way of saying, “Bug off!” Normally it is used only among llamas to divert annoying suitors, ward off a perceived threat, or most commonly, to establish pecking order at mealtime. Occasionally a llama who has been forced to tolerate excessive human handling may have developed an intolerance for or fear of humans, and will spit if it feels threatened by them.

Llamas require little care compared to other animals. Good hay when there is no pasture, fresh water, an iodized salt block, and a mineral block are all they need. Most United States pastures are low in selenium, a mineral important to llamas. It is important to know if pastures in your area are deficient and if they are, to provide supplements. They also like a variety of grains but it is not necessary with good pasture or hay. One 50 pound bale of grass hay will feed one llama for one week.

Any type of standard fence is adequate for llamas. Forty inches in height is sufficient. Board, wire mesh, pole, or barbed wire are all fine. If there is too much space between the ground and the fence, a baby can crawl under. Llamas can be trained to jump, but under normal circumstances, have no desire to escape an enclosure. Little land is required; one acre is enough for several llamas.

Llamas are very clean animals and have no odor. They defecate in one place, and the manure, high in nitrogen, is excellent fertilizer for gardens.
THINGS TO KNOW ABOUT LLAMAS

Llamas are used in many ways. These include breeding stock, pack animals, wool production, therapy, and pets.

Llamas are intelligent and easy to train. In just a few repetitions they will pick up and retain many behaviors such as accepting a halter, being fed, loading in and out of a vehicle, and pulling a cart or carrying a pack.

When training a llama, it is very important to remember that practicing with the llama often and repeating the actions will help the llama become familiar with what is expected. Be sure to give the llama verbal praise as it completes the required task. As the llama works with the trainer, it learns to trust the trainer and becomes more and more cooperative.

To help a llama become comfortable with being touched, move slowly and talk softly to help it relax. Stroke the llama while talking and move to different areas such as the head, legs and belly. This is called desensitizing the llama. With practice, the llama will become comfortable with being stroked all over its body.

Llamas have wool. The wool is grease-free. Lightweight llama wool is warm and luxurious and popular with spinners and weavers. Llama wool is made of two kinds of fiber. Guard hair is coarse and shiny. Undercoat is soft and used by the spinners and weavers.

Llamas are excellent packers. They can carry 50–120 pounds, but are not ridden except by children. Their two-toed foot with its leathery bottom pad gives them great surefootedness. This foot, and the llama’s ability to browse, gives the llama a low impact on the environment equivalent to that of a large deer.

Llamas are a modified ruminant with a three-compartment stomach. They chew their cud like cattle and sheep. They have front teeth on the lower jaw only. Because of a relatively low protein requirement due to their efficient digestive systems, they can be kept on a variety of pastures or hay.

Llamas are a highly social animal and need the companionship of their species. Independent yet shy, llamas are gentle and curious. Their calm nature and common sense make them easy for anyone, even children, to handle. They treat each other and each other’s babies with affection and concern. They lay down at night in family groups and bad weather finds them side by side in large groups.

BEGINNER LEVEL

I. HISTORY & BACKGROUND

Name four members of the South American Camelid family.
1. ____________________________
2. ____________________________
3. ____________________________
4. ____________________________

Explain the difference between a wild and domestic animal.
Wild: ____________________________
Domestic: ________________________

Name two uses for llamas.
1. ____________________________
2. ____________________________

Looking at the map of the Western Hemisphere on page 22, identify the continent from which llamas and alpacas originate. Label and color it green.
Locate on this map where you live. Color that continent blue.

II. THE LLAMA & HIS BEHAVIOR

An average adult llama is ________________ inches tall at the shoulders.
I am ________________ feet tall from head to foot.

Where are llamas missing teeth? ____________________________

How many compartments are in a llama’s or alpaca’s stomach? ________________

Since llamas and alpacas are herd animals, they should always have ________________ with them.

When or why does a llama spit? ____________________________

Identify the following body parts on the llama diagram on page 23.

_________ Pastern  ___________ Withers
_________ Abdomen (belly) ________ Fetlock
_________ Poll  ___________ Hock
_________ Back  ___________ Toenail
_________ Tail  ___________ Neck
_________ Knee (carpus)  ___________ Chestnut (scent gland)
III. TYPES
Name four colors of llama wool.
1. ____________________________
2. ____________________________
3. ____________________________
4. ____________________________
For shows, llamas are typed or grouped according to the length of their ____________

IV. CONFORMATION & CORRECTNESS
The way a llama is put together is called ____________________________

V. TEMPERAMENT
Llamas, like all other animals and people, have their own ____________________________

VI. PURCHASING A LLAMA
Llamas are good companions because they are ____________________________
and ____________________________

VII. SHELTER
How can a llama be protected from sun, rain, and wind? ____________________________
_____________________________________________________________________

VIII. DIET
What are the three main parts of a llama’s diet?
1. ____________________________
2. ____________________________
3. ____________________________

IX. GENERAL HEALTH & MAINTENANCE
Describe one type of preventive medicine a llama owner should use to help keep a llama healthy. ____________________________
A. VACCINATIONS
Why do llamas and alpacas need to be vaccinated? ____________________________

B. PARASITES
Worms living inside a llama are an example of ____________________________

C. FEET
List two parts of a llama’s toe.
1. ____________________________
2. ____________________________

D. HEAT STRESS & COLD WEATHER
What is the normal temperature of an adult llama? ____________________________
What types of weather cause the most stress on a llama? ____________________________
Is it healthy for a trainer to drastically change the type of food fed to a llama? _______

X. LLAMA TRAINING
List two ways to decrease stress on a llama while showing the animal.
1. ____________________________
2. ____________________________
If a trainer talks softly to a llama, what will probably happen? ____________________________

A. EQUIPMENT
Is it acceptable for the trainer to wrap a llama’s lead rope around his/her hand? _______
Where should the noseband of a halter lay on a llama’s or alpaca’s face? _______
How far away from the halter should a trainer grip the lead rope? ________________
B. procedure

Should a trainer move fast or slow around a llama and/or alpaca to help the animal gain trust in the trainer?

List three ways to gain a llama’s trust.
1. 
2. 
3. 

What are the two most important things a trainer can do while working with a llama, when teaching him to accept a brush or halter?
1. 
2. 

If a llama does not want to walk with its trainer, how might it be encouraged by that trainer?

What does desensitize mean?

What is the word that means lying down on command?

C. packing

What can be done for a llama by its trainer to show approval and to help the llama enjoy packing?
ACROSS CLUES

4. A baby llama.
5. A neutered llama.
6. A girl llama.
7. A camelid that is short and used primarily for its wool.
9. Llamas are members of this family.
11. How many toes on each foot does a llama have?
14. A person you should know and who you can call if a llama is sick.
16. Stiffer, more coarse wool.
17. Animals that chew cud.
18. Approximately how long is a llama's gestation?
19. A sound a llama makes.
20. These kind of teeth should be trimmed or removed from a male llama.
21. The mountain range from which lamas originated in South America.
22. Lots of this will help a llama feel comfortable in a show ring. "______________makes perfect!"

Youth Llama Project Personal Journal
I. HISTORY & BACKGROUND

Name four members of the South American Camelid family.
1. ____________________________
2. ____________________________
3. ____________________________
4. ____________________________

State four reasons why llamas have become popular in the United States.
1. ____________________________
2. ____________________________
3. ____________________________
4. ____________________________

Baby llamas are called ____________________________

Which of the South American camelids are domestic? ____________________________

Which of the South American camelids are wild? ____________________________

What group of people are given credit for domesticating the llama and alpaca? ________

Looking at the map of the Western Hemisphere on page 36, identify the countries in South America where llamas and alpacas originated. Locate where you live, too. Color the map.
II. THE LLAMA & HIS BEHAVIOR

An adult llama weighs between _______ and _______ pounds.

My pet __________________________ weighs ________ pounds.

Why are llamas and alpacas called cloven footed? ________________________________

Why is it impossible to find a “buck-toothed” llama? ____________________________

Name four animals that are ruminants.

1. __________________________  3. __________________________

2. __________________________  4. __________________________

The best companion for a llama or alpaca is _________________________________

Can llama spit really hurt someone? ________________________________

III. TYPES

What two basic types of fiber comprise a llama’s coat?

1. __________________________

2. __________________________

Match the llama type that is probably best suited for each kind of activity listed below.

Short-woolled __________________________ Spinning & weaving

Long-woolled __________________________ Packing

__________________________ Companion

What are the two basic types of llamas?

1. __________________________  2. __________________________

Identify the following body parts on the llama diagram on page 38.

_______ Elbow _______ Pad _______ Fetlock

_______ Poll _______ Pastern _______ Toenail

_______ Cheek _______ Fetlock _______ Chestnut (scent gland)

_______ Ear _______ Hock _______ Knees (carpus)

_______ Stifle _______ Croup _______ Withers

_______ Back _______ Abdomen (belly) _______ Sternum (breastbone)

_______ Tail _______ Nostril _______ Neck
IV. CONFORMATION & CORRECTNESS
If a llama is correct, it has good

V. TEMPERAMENT
Explain why caution should be taken if a llama is too friendly when young.

VI. PURCHASING A LLAMA
List three things to consider when choosing a llama for a 4-H project.
1. 
2. 
3. 

VII. SHELTER
Does a llama need shelter? Why?

VIII. DIET
During which season of the year might it be most important to provide supplemental feeding for a llama?
IX. GENERAL HEALTH & MAINTENANCE

List two types of preventative medicine a llama owner should use to help keep a llama healthy.

1. _____________________________________________
2. _____________________________________________

A. VACCINATIONS

What are two things llamas and alpacas should be vaccinated for?

1. _____________________________________________
2. _____________________________________________

B. PARASITES

List three ways internal parasites can affect a llama.

1. _____________________________________________
2. _____________________________________________
3. _____________________________________________

List two types of external parasites.

1. _____________________________________________
2. _____________________________________________

C. TEETH & FEET

When is a llama more likely to need its toenails trimmed? ____________________________

What are the purpose of fighting fangs and who gets them? ____________________________

D. HEAT STRESS & COLD WEATHER

What is the normal temperature of an adult llama versus the temperature of a cria?

List three signs of heat stress.

1. _____________________________________________
2. _____________________________________________
3. _____________________________________________

What will a sudden change in diet cause to happen with a llama? Why? ____________________________
X. TRAINING

List four ways to decrease stress on a llama while showing the animal.
1. _____________________________________________________________
2. _____________________________________________________________
3. _____________________________________________________________
4. _____________________________________________________________

List two ways to help a llama or alpaca relax when training.
1. _____________________________________________________________
2. _____________________________________________________________

A. EQUIPMENT

Why is it not acceptable for the trainer to wrap a llama's lead rope around his/her hand? __________________________

________________________________________________________________________

________________________________________________________________________

How does more experience help a good llama trainer become a better llama trainer?

________________________________________________________________________

________________________________________________________________________

Name two styles of halters and the differences in each.
1. _____________________________________________________________
2. _____________________________________________________________

Explain why you should not hold onto the snap when your llama is on lead. ________

________________________________________________________________________

________________________________________________________________________
B. PROCEDURE

Sessons of approximately _______ minutes are appropriate when starting to train a llama.

List six places that are important to desensitize when training a llama.

1. __________________________  4. __________________________
2. __________________________  5. __________________________
3. __________________________  6. __________________________

Why is brushing considered to be such a good way to desensitize your llama? ______

______________________________________________________________

List two important things a trainer can do while working with a llama, when teaching the llama to accept a halter.

1. __________________________
2. __________________________

Why would it be dangerous to have a llama’s halter resting below the nose bone?

______________________________________________________________

Why must a llama trainer continually check a llama’s halter fit?

______________________________________________________________

What is a slipknot and why should it be used?

______________________________________________________________

How long might it take to desensitize a llama?

List three times it might be helpful for a llama to kush for its trainer?

1. __________________________
2. __________________________
3. __________________________

C. PACKING

How old should a llama be before a trainer should expect him to pack 30 pounds?
CLUES: INTERMEDIATE LEVEL
CROSSWORD PUZZLE

ACROSS CLUES

2. The way a llama says, “Bug-Off!”
4. Animals that chew cud.
6. The word that describes what a llama does when it carries a load.
7. A word that describes animals that do not show signs if they are not feeling well.
8. Any animal that has been developed to help man.
9. The camelid from which llamas originated.
10. A person you should know and who you can call if a llama is sick.
11. The _______ of a llama tears off the grass with the lower teeth and is called prehensile.
12. Looking at a llama: the way a llama is put together.
14. Kind of teeth that should be removed from a male llama.
18. Approximately how long is a llama’s gestation?
19. Stiffer, more coarse part of llama wool.
20. Mountain region where llamas originate.
21. Continent from which llamas originate.
24. Llamas are members of this family.
25. Word that describes helping a llama to be comfortable with being touched on legs, head, etc.
26. Dry spot on lower leg that is non-functioning.
27. On the back legs, a joint area that gets dirty easily and is often worn.

DOWN CLUES

1. Smaller South American camelid.
3. Number of toes on each foot.
5. Part of wool that is fine and primarily used for spinning.
7. A llama has three compartments in this.
9. Name of a male llama that has been neutered.
10. Shots given to animals to prevent sickness.
13. Base of neck near the back.
15. Name the country in South America where llamas have been domesticated.
16. Kind of upper lip that a llama has.
17. The bottom of a llama’s foot.
20. Animal from the camelid family that is short and used primarily for wool.
22. The kind of foot that has two toes.
23. A girl llama.

Youth Llama Project Personal Journal
I. HISTORY & BACKGROUND

List four members of the South American camelid family and explain in detail the differences in each.

1. 

2. 

3. 

4. 

List three countries in South America that llamas come from.

1. 

2. 

3. 

What is the genus for the South American camelids? 

Why are llamas and alpacas classified in the camelid family? 

Describe the South American climate in which llamas and alpacas live.

Look at the map of the Western Hemisphere on page 52 and identify the following information about where llamas and alpacas originate.

A. The continent
B. The countries
C. The mountain ranges in those countries

Locate where you live. Color the entire map.
WESTERN HEMISPHERE

0 500 1,000 1,500 Miles
0 500 1,000 1,500 2,000 Kilometers
II. THE LLAMA & HIS BEHAVIOR

An average horse weighs 1500 pounds. How many average size llamas would it take to equal a horse’s weight? _____________________________

What is the size comparison of llamas and alpacas? _____________________________

List three other cloven-footed animals.
1. _____________________________
2. _____________________________
3. _____________________________

Why are llamas less destructive to terrain than horses? _____________________________

Why is a llama’s upper lip called prehensile? _____________________________

What is the term for an animal with many compartments in its stomach?____________

List four different ruminants including one which occurs in the wild throughout the United States.
1. _____________________________
2. _____________________________
3. _____________________________
4. _____________________________

A llama may live as long as _____________________________ years.

A llama may have a cria for _____________________________

Define the function of the following parts of a llama:
Lungs: _____________________________

Heart: _____________________________

Liver: _____________________________

Kidneys: _____________________________

Cud/Stomach: _____________________________
Identify the following body parts on the external llama diagram.

_________ Pastern
_________ Poll
_________ Tail
_________ Withers
_________ Fetlock
_________ Neck
_________ Chestnut (Scent gland)
_________ Croup
_________ Nostril
_________ Hock
_________ Chin
_________ Throat

List two reasons why a llama might spit.
1. ____________________________________________________________
2. ____________________________________________________________

Explain the process that enables a llama to spit. ________________________________
______________________________________________________________
______________________________________________________________

III. TYPES
What is the purpose of guard hair? ________________________________
______________________________________________________________
What is the purpose of a llama's finer undercoat? ________________________
______________________________________________________________
If you plan to make a sweater, would you prefer llama wool or alpaca wool? Why? ______
______________________________________________________________

IV. CONFORMATION & CORRECTNESS
List three conformation points to observe in a correct llama.
1. ____________________________________________________________
2. ____________________________________________________________
3. ____________________________________________________________

V. TEMPERAMENT
Explain Aberrant Male Behavior, why it happens and signs of an animal with it. _______
______________________________________________________________
______________________________________________________________
______________________________________________________________

VI. PURCHASING A LLAMA
List three organizations from which someone could gain information concerning llamas.
1. ____________________________________________________________
2. ____________________________________________________________
3. ____________________________________________________________
VII. SHELTER
What is the minimum height of a fence required to contain a llama?

VIII. DIET
A llama consumes _______ % of its total body weight of food per day.
How much feed does your llama require per day?
State a mineral that should be provided for all llamas at all times.

IX. GENERAL HEALTH & MAINTENANCE
What is the best way to detect if a llama is or is not healthy?
Define the word “stoic.”
How might “stoic” apply to a llama?
List four types of preventative medicine a llama owner should use to help keep a llama healthy.
1.
2.
3.
4.

A. VACCINATIONS
What are three things llamas and alpacas need to be vaccinated for?
1.
2.
3.

B. PARASITES
Describe how two different farms in your area control parasites.
1.
2.
What deadly parasite might a white tail deer pass on to llamas?
List two reasons why a llama could lose wool in patches.
1.
2.
C. TEETH & FEET

How can a llama owner tell if a llama needs its toenails trimmed?

How old are llamas when they grow their fighting teeth?

How many fighting teeth do male llamas grow and where are they?

D. HEAT STRESS & COLD WEATHER

What is the normal temperature of an adult llama and how do you check it?

How does a llama trainer prevent heat stress?

List three signs of heat stress.
1. 
2. 
3. 

List three ways to help a llama experiencing heat stress.
1. 
2. 
3. 

What should be done to prevent problems when changing a llama’s diet?

List six ways to decrease stress on a llama while showing the animal.
1. 
2. 
3. 
4. 
5. 
6. 

X. LLAMA TRAINING

In your opinion what are the two most important places to desensitize and why?
1. 
2. 

ADVANCED  59
List four steps in desensitizing the back legs.

1. ____________________________  3. ____________________________
2. ____________________________  4. ____________________________

A good llama trainer can anticipate a llama’s actions by first ____________________________
and ____________________________ the llama’s movements.

If working with a llama who spits or kicks, explain how you would try to change this behavior.

__________________________________________________________________________________

A. EQUIPMENT

Why is it important to put a halter on and off continually when training a llama? __________

__________________________________________________________________________________

List three things a llama trainer might do to help an untrained llama follow on a lead rope.

1. ____________________________
2. ____________________________
3. ____________________________

B. PROCEDURE

List three ways to gain a llama’s trust.

1. ____________________________
2. ____________________________
3. ____________________________

What is the tug and release technique? ____________________________

__________________________________________________________________________________

List the two most important things to remember when desensitizing a llama.

1. ____________________________
2. ____________________________

C. PACKING

How does a trainer know how much weight a llama can pack? ____________________________

__________________________________________________________________________________

What is a good first step when getting ready to train your llama to pack? __________

__________________________________________________________________________________

How can a trainer help a llama keep its balance while packing? ____________________________

__________________________________________________________________________________
ACROSS CLUES

2. The way a llama says, “Bug-Off!”
4. Animals that chew cud.
6. The word that describes what a llama does when it carries a load.
7. A word that describes animals that do not show signs if they are not feeling well.
8. Any animal that has been developed to help man.
9. The camelid from which llamas have been domesticated.
10. A person you should know and who you can call if a llama is sick.
11. The _________ of a llama tears off the grass with the lower teeth and is called prehensile.
12. Looking at a llama: the way a llama is put together.
14. Kind of teeth that should be removed from a male llama.
18. Approximately how long is a llama’s gestation?
19. Stiffer, more coarse part of llama wool.
20. Mountain region where llamas originate.
21. Continent from which llamas originate.
24. Llamas are members of this family.
25. Word that describes helping a llama to be comfortable with being touched on legs, head, etc.
26. Dry spot on lower leg that is non-functioning.
27. On the back legs, a joint area that gets dirty easily and is often worn.

DOWN CLUES

1. Smaller South American camelid.
3. Number of toes on each foot.
5. Part of wool that is fine and primarily used for spinning.
7. A llama has three compartments in this.
9. Name of a male llama that has been neutered.
10. Shot given to animals to prevent sickness.
13. Base of neck near the back.
15. Name the country in South America where llamas originated.
16. Kind of upper lip that a llama has.
17. The bottom of a llama’s foot.
20. Animal from the camelid family that is short and used primarily for wool.
22. The kind of foot that has two toes.
23. A girl llama.

BEGINNER LLAMA PROJECT ANSWER GUIDE

I. HISTORY & BACKGROUND

1. Llama
2. Alpaca
3. Guanaco
4. Vicuna

Wild: An animal in its natural environment
Domestic: An animal developed to help man

Uses:
1. Work animals to carry loads
2. Wool producers

II. THE LLAMA AND HIS BEHAVIOR

An average llama is 36–47 inches at the shoulder.
A llama has no top front teeth.
A llama has three compartments in its stomach.
They should always have other animals, preferably camelids with them.
A llama spits to communicate among other llamas and to say, “Bug off.”

BEGINNER LEVEL DIAGRAM:

I. Pastern
J. Abdomen (belly)
A. Poll
D. Back
E. Tail
L. Knee
C. Withers
H. Fetlock
F. Hock
K. Toenail
B. Neck
G. Chestnut (scent gland)
III. TYPES
Colors:
1. White
2. Black
3. Brown
4. Tan
5. Other combinations of these.

Grouped according to their wool.

IV. CONFORMATION & CORRECTNESS
The way a llama is put together is called conformation.

V. TEMPERAMENT
Llamas have their own personality.

VI. PURCHASING A LLAMA
Llamas are good companions because they are alert and intelligent.

VII. SHELTER
Llamas need some sort of shelter, a basic three sided structure will usually be adequate.

VIII. DIET
1. Water
2. Food
3. Minerals

IX. GENERAL HEALTH & MAINTENANCE
A llama owner should provide a mineral supplement for the llamas.

A. VACCINATIONS
Vaccinate llamas to prevent them from getting parasites. This can cause negative affects on the llama’s system.

B. PARASITES
Internal parasites

C. FEET
1. Toenails
2. Pads

D. HEAT STRESS & COLD WEATHER
Normal temperature of an adult llama is 99°–101.8°F.

Extreme heat or extreme cold.

DO NOT drastically change diet because a sudden change in ruminant’s diet can cause serious problems.
X. LLAMA TRAINING

Decrease stress:
- Talk to llamas gently
- Rub or stroke a llama
- Practice often
- Interpret llama’s body language
- Anticipate llama’s actions
- Be consistent
- Hold firmly

A llama will relax upon hearing a calm, reassuring voice.

A. EQUIPMENT

It is never acceptable to wrap a lead rope around your hand.

The noseband should lie on the bone and not on the fleshy part of a llama’s nose.

Hold the lead rope two–three feet from the halter.
(The excess should be lapped over in the free hand— not wrapped.)

B. PROCEDURE

A trainer should move slowly to help a llama trust him.

To gain a llama’s trust:
1. Be consistent
2. Repeat the process
3. Talk softly
4. Allow the llama to become familiar with you

To help the llama accept a brush or halter:
1. Move slowly
2. Be patient

Use a short tug on the lead rope to encourage a llama.

Slowly and steadily, touch certain areas on a llama’s body.

Kush

C. PACKING

A llama will enjoy packing more if you let him smell the pack first. Start with something very light and quiet such as a pillow case or large sweatshirt. Talk to the llama and encourage him.

INTERMEDIATE LEVEL ANSWER GUIDE

I. HISTORY & BACKGROUND
   1. Vicuna
   2. Alpaca
   3. Guanaco
   4. Llama

   Reasons for popularity:
   1. Pets
   2. Pack animals
   3. Sheep guards
   4. Entertainment
   5. Companions
   6. Wool producers
   7. Cart pullers, etc.

   Crias

   Domestic: Llamas and alpacas

   Wild: Guanaco and vicuna

   People from Peru

II. THE LLAMA & HIS BEHAVIOR

   An adult llama weighs between 250 and 450 pounds.

   Llamas are called cloven footed because they have two toenails.

   Because llamas do not have top front teeth.

   Ruminants:
   1. Cows
   2. Camels
   3. Sheep
   4. Goats

   The best companion for a llama or alpaca is another llama or alpaca.

   No. it smells unpleasant but it does not hurt.

III. TYPES

   1. Guard
   2. Down

   Spinning and weaving: Either
   Packing: Short
   Companion: Either

   Basic types of llamas;
   1. Short-woolled
   2. Long-woolled

   INTERMEDIATE LEVEL DIAGRAM:

   O. Elbow
   A. Poll
   B. Cheek
   U. Ear
   M. Stifle
   E. Back
   G. Tail
   L. Pad
   K. Pastern
   J. Fetlock
   H. Hock
   F. Croup
   N. Abdomen (belly)
   P. Fetlock
   Q. Toenail
   I. Chestnut (scent gland)
   R. Knee
   D. Withers
   S. Sternum
   C. Neck
IV. CONFORMATION & CORRECTNESS
If a llama is correct it has good conformation.

V. TEMPERAMENT
Because the llama might bond with people.

VI. PURCHASING A LLAMA
Consider:
1. Good bone structure
2. Conformation
3. Temperament

VII. SHELTER
Yes. A llama needs shelter because it needs to be protected from rain, wind, and sun.

VIII. DIET
A llama owner should provide supplemental feeding during the winter because of the lack of actively growing pasture.

IX. GENERAL HEALTH MAINTENANCE
Preventative medicine:
1. Vaccinate llamas to prevent parasites.
2. Watch llamas to recognize odd or unusual behavior.

A. VACCINATIONS
1. Worms
2. Tetanus

B. PARASITES
Ways internal parasites affect llamas:
1. Lose weight
2. Digestive problems
3. Get sick more easily

Two types of external parasites:
1. Lice
2. Mange

C. TEETH & FEET
A llama is more likely to need its toenails trimmed in the spring because it is living on soft grassland.

To prove male dominance (usually in males 2–3 years old).

D. HEAT STRESS & COLD WEATHER
Temperature of an adult llama: 99º–101.8ºF; Cria: 100º–102ºF.

Signs of heat stress:
1. Extreme laziness
2. Open-mouth panting
3. Loss of coordination

A change in diet causes serious problems such as diarrhea due to shock to the system.
X. TRAINING

Ways to decrease stress:
1. Talk softly
2. Be consistent
3. Hold firm
4. Interpret llama’s body language
5. Practice the activities often
6. Stroke the animal to comfort
7. Anticipate llama’s action

Ways to relax a llama or alpaca when training:
1. Go SLOWLY
2. Try not to corner the llama

A. EQUIPMENT

*You could be dragged or injured* if the llama should become excited or scared.

To get better, *PRACTICE!!* That will give you more experience.

Two styles of halters and their differences:
1. X-style gives more movement and comfort if worn for extended period of time.
2. Standard style gives the handler more control when training.

The llama *could jerk and get loose*.

B. PROCEDURE

15 minutes at a time (even several times a day).

Six places to desensitize a llama:
1. Head
2. Legs
3. Belly
4. Feet
5. Ears
6. Tail
7. Mouth

Teaches them *to be touched all over without being afraid*.

To teach a llama to accept halter:
1. Move slowly
2. Be patient

*It could shut off the airflow through the nose* because of the soft cartilage.

*Llamas grow fast.* If a halter is too tight it can cut into the nose.

A slipknot is a knot that *can be released quickly in case the llama gets distressed* in any way.

Some llamas seem to be more receptive than others and training sessions may *vary*. Be patient and move slowly.

Times it might be helpful for the llama to kush:
1. To do vet work
2. To pack
3. To trailer
4. For emergencies

C. PACKING

To pack 30 pounds, a llama should be *two years old*. 
ANSWERS: INTERMEDIATE LEVEL CROSSWORD PUZZLE

ANSWERS: INTERMEDIATE LEVEL BODY PARTS DIAGRAM CROSSWORD PUZZLE
ADVANCED LEVEL ANSWER GUIDE

I. HISTORY & BACKGROUND
1. Llama Largest, domesticated
2. Alpaca Smaller, primarily used for wool production
3. Guanaco Original type markings same on all, wild
4. Vicuna Endangered, smallest, wild

Three countries llama come from:
1. Peru
2. Chile
3. Bolivia

Genus: *Lama Glama*

Llamas and alpacas are classified in the camelid family because *they are both descended from guanacos.*

The climate is tierra fria which means cold at the top of the Andes, tierra templada which means mild on the plateau area of the middle of the Andes, and tierra caliente which means warm on the low lands.

II. THE LLAMA AND HIS BEHAVIOR
*Five* llamas would equal one average horse in size.

Llamas are tall and slender while alpacas are shorter.

Other cloven-foot animals:
1. Cow
2. Goat
3. Pig

The *pad on the bottom of a llama’s foot* is less destructive than a horse’s hard hoof.

A llama’s lip is called prehensile because *it is structured to seize or grasp grasses when eating.*

An animal with compartments in its stomach: *ruminant*

Other ruminants:
Wild: defer
Domesticated: sheep, cow, and goat

A llama can live 15–20 years.

A llama can have a cria *until she dies!*

Lungs: Lungs bring oxygen into the body to send it through the system.
Heart: The heart sends blood throughout the entire body to deliver oxygen and nutrition so that the body can function.
Liver: The liver works in the formation of blood, secretes bile, metabolizes carbohydrates, fats, proteins, minerals, and vitamins.
Kidneys: A pair of organs that function to maintain proper water balance, regulate acid base concentration, and excrete wastes as urine.
Cud/Stomach: Food regurgitated from the first stomach to the mouth to be chewed again. The stomach is where food is broken down so that the nutrients can be used by the body.
ANSWERS: ADVANCED LLAMA DIAGRAMS

EXTERNAL:

N. Pastern
A. Poll
H. Tail
D. Withers
M. Fetlock
C. Neck
L. Chestnut (scent gland)
G. Croup
BB. Nostril
K. Hock
Z. Chin
X. Throat
V. Chest
I. Thigh
AA. Muzzle

INTERNAL:

H. Fetlock
M. Ribs
B. Humerus
P. Pelvis
E. Radius
I. Fetlock
A. Scapula
K. Hock

P. Abdomen (belly)
E. Back
U. Knee
B. Cheek
Q. Elbow
T. Toenail
CC. Ear
R. Fetlock
O. Pad
J. Stifle
Y. Jaw
F. Hip
W. Shoulder
S. Foot

L. Tibia
N. Stifle
C. Sternum
O. Femur
J. Hind Canon
F. Knee
G. Front Cannon
D. Elbow
Herd animals:
1. Elephants
2. Antelope

Why llamas spit:
1. If they are pregnant
2. Males showing dominance
3. If the llama does not like something

Because they are ruminants, this process enables them to project stomach contents.

III. TYPES
Guard hair is long, shiny, and coarser than other wool. Guard hair allows air to circulate and keeps the coat more manageable.

Undercoat is soft and fine and is used for spinning.

To make a sweater, you would probably choose alpaca wool because it includes no guard hair. Llama wool that is long and well carded would also be a good choice.

IV. CONFORMATION & CORRECTNESS
Conformation points to look for in a sound and structurally correct llama:
1. Back legs that are straight
2. Front legs that are straight
3. Head held high
4. Neck that is in proportion to the body and legs
5. Ears that are correct, etc.

V. TEMPERAMENT
An animal that has bonded to people can be very dangerous. They become aggressive because they have been bottle fed.

VI. PURCHASING A LLAMA

VII. SHELTER
Minimum fence height; four feet

VIII. DIET
A llama consumes one to two percent of its total body weight.

(Calculate how much your llama eats.)

Salt should be provided at all times.
IX. GENERAL HEALTH & MAINTENANCE

Best way to detect if llama is healthy or not: *observation*.

Stoic: Does not show signs if sick or not feeling well. This describes a llama because they usually do not indicate that they are in pain or discomfort.

Types of preventative medicine for a llama:
1. Vaccinations
2. Cut fighting teeth from males
3. Provide minerals
4. Provide proper food
5. Provide clean, fresh water
6. Trim toenails
7. Clean pens

A. VACCINATIONS
Llamas need to be vaccinated to prevent:
1. Tetanus
2. Worms
3. Clostridium C & D

B. PARASITES
(Local parasite control response.)

Deadly parasite a white tailed deer could pass on: *Meningeal worm*.

A llama could lose wool because of:
1. Shedding
2. Skin parasites

C. TEETH & FEET
A llama owner can tell if a llama needs its toenails trimmed by looking at its feet and toenails regularly.

A llama generally grows fighting teeth at 2 1/2 years old.

A male llama has six fighting teeth. Normally two on top and one on the bottom of each side.

D. HEAT STRESS & COLD WEATHER
Normal temperature of an adult llama; 99º–101.8ºF. Check with a rectal thermometer.

To prevent heat stress: *Have plenty of fresh water at all times and provide shade*.

Three signs of heat stress:
1. Extreme laziness
2. Open-mouth panting
3. Loss of coordination

To help a llama experiencing heat stress:
1. Spray the llama’s underbelly, legs, and wool-free leg quarters with cool water
2. Use a fan to circulate air
3. Wading pools
4. Shade

Diets should be changed slowly by combining the old and the new for a period of time so that their system can adjust.

To decrease stress while showing llama’s:
1. Practice
2. Talk softly
3. Stroke llama
4. Hold firmly
5. Interpret llama’s body language
6. Be patient
7. Anticipate llama’s actions
8. Be consistent
X. LLAMA TRAINING

Two most important areas to desensitize:
1. Head
2. Legs

Four steps in desensitizing the back legs:
1. Get the llama used to you standing at its side.
2. Brush down the back and front of legs with your hand.
3. Use the brush on the legs.
4. Run your hand down the legs, finally picking up the legs.

A good llama trainer can anticipate a llama’s actions by recognizing and interpreting the llama’s movements.

Move slow and work easily using lots of repetitions.

A. EQUIPMENT

A growing llama will periodically need a larger halter, and it helps to desensitize.

When training a llama to walk with a lead rope:
1. Say WALK
2. Tug sideways
3. Have the llama walk with a llama buddy
4. Have a friend (human) walk behind the llama

B. PROCEDURE

To gain trust:
1. Talk
2. Feed
3. Stroke

To tug and release gives them a choice instead of forcing them to move.

When desensitizing:
1. Move slowly and be patient
2. Reward llama with verbal praise

C. PACKING

A full grown llama can hold 1/4 to 1/3 of its body weight when packing.

A llama must trust its trainer before it will feel comfortable while packing.

Be sure to pack the load so it is weighted evenly on both sides.
